

The Daily Book of OPLURIX

A living operating text for the work you are building through OPLURIX, ERIS, FounderAI, research visibility, disciplined products, and field-grounded stewardship.

Edition: 2026-05-27

Source base: 515 tracked files

Canonical text: Markdown first, browser edition synced

REMEMBER

Survival engine first. Stewardship always.

Read this when you need your work to become clear again, and when you need ambition to stay inside truth instead of running ahead of it.

The visual language of this book is the same as the mission: forest, signal, observation, contour, pattern, and a promise that useful ecological intelligence can remain scientifically honest.

core parts: vision,
system, roadmap,
practice

20

chapters in the canonical
book

Daily path

If you only have ten minutes, read these five stops.

This is the shortest useful loop: purpose, principles, business truth, critical path, and daily reminder.

1. Origin story

Reset your posture before work starts.

Read it

2. Principles

Read this when pressure starts negotiating with truth.

Read it

3. Business model

Read this when you need to remember what is actually live.

Read it

4. Critical path

Read this when you feel busy but not directional.

Read it

5. Daily reminder

Read this before work, or when you need to restart the day.

Read it

Contents

The whole book at a glance.

Part I. The Vision

Origin story, the problem, the world being built, and the rules that cannot be traded away.

Part II. The System

Business model, funnel, FounderAI, research logic, repository atlas, KPIs, and risk controls.

Part III. The Roadmap

Long arc, 2026-2027 operating year, technical roadmap, launch sequence, and dependency order.

Part IV. The Daily Practice

Rituals, decision frameworks, review triggers, doubt logic, and the daily reminder.

Part I

The Vision (Why This Exists)

This part keeps you anchored in why OPLURIX exists, what gap it is solving, what world it is building toward, and what you are never allowed to fake.

You are not building a fake founder story. You are building a body of work that begins in Madagascar and compounds into legitimate ecological intelligence infrastructure.

Chapter 1

The origin story and core purpose

For years, some of your most valuable conservation work stayed trapped in your own notebooks: lemur focal follows in Beza Mahafaly, herpetofauna surveys in Ambatotsirongorongo, and mammal transects in Ihofa Forest.

The work had value. The problem was translation. You did not have a clean system for turning raw field experience, partial datasets, mistakes, patterns, and caution into public communication, bounded products, structured services, grant logic, and eventually governance infrastructure.

That is why OPLURIX exists. OPLURIX is the public-facing layer that lets real conservation work travel further without losing honesty. ERIS is the longer arc beneath it. FounderAI is the operating substrate that protects memory, approvals, and execution discipline while the work scales carefully.

REMEMBER

"Survival engine first. Stewardship always."

You are not building content for content's sake. You are building trust, proof, leverage, and future institutional legitimacy.

The problem you are solving

Personal and practical

Useful conservation knowledge does not automatically become readable, discoverable, or fundable.

Sector-wide

Field teams and researchers generate insight that often never escapes reports, drives, notebooks, or internal debriefs.

Methodological

Conservation work is full of ambiguity, small samples, messy field conditions, and hard-won practical judgment.

Structural

The world still lacks enough open, auditable, field-grounded ecological integrity infrastructure in Madagascar and similar contexts.

That is why the repository now holds four simultaneous answers:

- OPLURIX digital products for recurring conservation bottlenecks
- public research pages and campaigns for visible honest science
- bounded services and Techni-Drones leverage for survival and proof
- ERIS and FounderAI for deeper governance and systems work

The world you are building toward

Phase 1: Foundation

Window: now to 18 months

- survive
- learn
- build credibility
- deliver useful work
- prove that conservation, data, products, and systems can coexist

Milestone: first paid client in 30 days and repeatable delivery proof soon after.

Phase 2: MRV Startup

Window: years 2 to 5

- formalize measurement work
- build institutional credibility
- connect field method, products, and services into a moat

Milestone: first institutional MRV contract.

Phase 3: ERIS

Window: years 5 to 15

Move from useful work and protocol into governance influence. Make methodology adopted, not merely proposed. Make stewardship infrastructure real.

Milestone: one national or institutional MRV body adopts the methodology.

WHEN YOU DOUBT

When you doubt: the small work is not separate from the long work. It is how the long work becomes real.

Your non-negotiable principles

Identity and voice

- conservation biologist
- drone instructor
- environmental data specialist
- building from Madagascar
- warm, scientific, direct, specific voice

Operating hierarchy

1. protect cash flow and dignity now
2. convert Techni-Drones work into credibility, equipment, and equity leverage
3. use grants, pilots, and delivery to build the ERIS moat
4. feed useful work into governance infrastructure

GOVERNANCE ANCHOR	CURRENT RULE
Salary cap	USD 150,000
Founder voting equity maximum	5%
Single investor voting equity maximum	5%
Steward conversion target year	5
Exclusivity agreements	false
Governance clause in financial proposals	required

REMEMBER

Speak from what is real. Reality compounds. Performance collapses.

No fake scale. No invented clients. No extractive work. No M400-first story. No black-box authority. No short-term sale that creates long-term distrust.

Part II

The System (How It Works)

This part explains the business model, the funnel, FounderAI, the research layer, the repository itself, and the metrics that keep the whole structure honest.

The public pieces are not random. They are one system. If one surface lies, the whole system weakens.

The business model in plain language

Current live offer

- **Product:** Expert-to-Influencer Content Engine
- **Status:** live
- **Price:** USD 39
- **Checkout:** Payhip
- **Audience:** field biologists, researchers, conservation professionals

PRODUCT	STATUS	PRICE	BEST CURRENT FORMAT
Expert-to-Influencer Content Engine	live	USD 39	hybrid
Training-to-Quiz Generator	coming_soon	USD 29	PDF plus templates
Gear & Equipment Concierge	source_only	USD 39	hybrid
Biodiversity Pitch Deck Builder	coming_soon	USD 69	PDF plus editable slides
Handwritten Log Digitizer	source_only	USD 39	PDF plus workbook
Field Mission Planner	source_only	USD 49	PDF plus checklists
Biodiversity Data Harmonizer	source_only	USD 99	PDF plus templates
Thermal Data Translator	source_only	USD 149	PDF plus code
Grant Writing Co-Pilot	source_only	USD 199	PDF plus templates
MRV Report Architect	source_only	USD 499-999	hybrid high-ticket

The business model also includes bounded services, Techni-Drones leverage, grant pathways, research visibility, and the longer ERIS infrastructure layer.

The current truth is still simple: one live product, Payhip checkout, Shopify temporary, repo site authoritative, Products 2 to 4 next, Products 5 to 10 earlier-stage.

The public surfaces, funnel, and buyer journey

Current surfaces

- homepage
- About EN and FR
- Projects
- Field Notes
- ATBC EN and FR
- Product 1 EN and FR
- checklist pages EN and FR
- thank-you page
- bilingual services pages

Route by temperature

- cold visitors -> homepage, About, Projects, ATBC, checklist
- warm visitors -> product page
- hot visitors -> direct Payhip checkout
- research-support visitors -> ATBC page, direct support, or mission-aligned purchase

Current tools

- GitHub Pages for the public site
- Payhip for current live checkout and delivery
- Shopify as temporary storefront/marketing layer
- Netlify as later migration path
- Kit prepared in repo, not yet fully live

Prepared Kit structure

- OPLURIX Checklist EN
- OPLURIX Checklist FR
- OPLURIX Updates General
- OPLURIX Product Interest
- tagged by language, intent, lifecycle, and source context

REMEMBER

Remember: the funnel is not there to force people into buying. It is there to match the route to the visitor's temperature.

FounderAI, founder-brain, and the operating core

FounderAI-Ollama-Rust exists to preserve founder identity, approvals, file-based auditability, six-lane structure, Techni-Drones and ERIS context, and hosted plus local model flexibility.

Six lanes

- A-Outreach
- A-Production
- B-Outreach
- B-Production
- C-Outreach
- C-Production

Overlay agents

- Bartholomew
- Pio
- Zacchaeus
- Perpetua
- Hildegard
- Clare
- Francis
- Columban

Runtime commands

- daemon
- serve
- tick
- trigger
- status
- approvals
- approve
- reject
- request

Current model stack

- default provider: claude
- default model: claude-sonnet-4-6
- other providers: ollama, openai
- task types include briefing, grant, scheduler, proposal, draft, and more

Do not optimize for magic. Optimize for inspectable leverage.

Research, method, and scientific credibility

Credibility anchors

- Flowers et al. 2023
- IPS Congress 2025 presentation
- Zonosaurus master thesis, 2018
- Pierre Castel Prize laureate, 2025

ATBC 2026 research

Thermal drone surveys in Manakoakora and Ihofa detected multiple lemur species across a wide range of body sizes using a Mavic 3T.

The method is non-invasive, expands access to under-monitored forests, and connects to future computer vision detection work.

ERIS method order

1. proof of concept first
2. replicable protocol second
3. pilot ERIS score third

Equipment pathway

- DJI Matrice 350 RTK
- Zenmuse H30T
- MicaSense Altum-PT
- M350-first grant logic, not M400-first fantasy

WHEN YOU DOUBT

When you doubt: you do not need generic AI language to sound credible. Forests, methods, caution, and repeated field learning already give you something stronger.

Repository atlas: what this repository actually contains

TOP-LEVEL DOMAIN	FILE COUNT	MAIN ROLE
sales	248	product packages, zips, delivery support, launch assets
docs	96	public site, campaigns, operations, roadmaps, book, checklists
documents	68	source materials, extracted docs, references
founder-brain	32	identity, governance, strategy, KPIs, rubrics
scripts	25	asset generators, packaging helpers, visual builders
src	19	Rust runtime
config	7	runtime configs, agents, nurture, deadlines

Visual description: logo

A dark lizard curves inside a hexagon around a camera-aperture form in green, teal, and gold. It says field reality, watchfulness, ecology, image capture, and method in one symbol.

Visual description: website cover

A dark aerial forest scene is marked with warm glowing canopy points, faint contour lines, and measurement cues. It frames OPLURIX as conservation observed, measured, interpreted, and made legible.

Visual description: ATBC preview

The forest is treated as a living archive with too little formal monitoring.

Detection and mapping cues reinforce the promise of visibility for under-monitored places.

Visual description: FounderAI roadmap

A time band runs from April 20 to May 25, 2026, moving from sync work to proof, hardening, review upgrades, bounded improvements, Gmail, and low-cost deployment without replacing the daemon shape.

Metrics, thresholds, and risks

KPI	GREEN	YELLOW	RED
Inbound first-response	under 30 min	30-120 min	over 120 min
Outreach personalization	over 90%	75-90%	under 75%
Reply rate	over 5%	2-5%	under 2%
QA pass rate	over 90%	80-90%	under 80%
Weekly review cadence	every week	late once	skipped twice
Offline queue backlog	0-3	4-10	over 10
Approval turnaround	under 24h	24-72h	over 72h

Grant deadline drift

Pio must surface deadlines before silence turns into missed windows.

Equipment overreach

The M350-first rule protects fundability and credibility.

Techni-Drones leverage stall

If the vertical stays vague, survival and equity leverage weaken.

Approval regression

Protected work must remain reviewable and artifact-backed.

Docs drift

Strategy and repo behavior must not diverge silently.

Vibecoding drift

Opaque AI changes are unacceptable without explanation, QA, and verification.

Part III

The Roadmap (The Path Forward)

This part holds the long arc, the 2026-2027 operating year, the FounderAI technical path, the launch logic, and the exact dependencies that matter now.

Your main bottleneck is no longer making the site prettier. Your main bottleneck is disciplined follow-through across the existing system.

Chapter 11

The long arc: now, years 2 to 5, and years 5 to 15

Now

Keep the freelance engine alive, build the founder-brain moat, preserve approvals, strengthen research credibility, and convert repeated manual work into inspectable workflows only when understood.

Years 2 to 5

Move from repeated useful work to stronger protocol, institutional credibility, and the first institutional MRV contract.

Years 5 to 15

Move from proposed method to adopted methodology and real ecological integrity infrastructure.

The operating year: April 29, 2026 to April 30, 2027

DAY	TIME	ACTIVITY	TRACK
Monday	07:00-08:00	Weekly orientation	All
Monday	18:00-20:00	Conservation client outreach	B
Tuesday	18:00-20:00	Grant writing	C
Wednesday	18:00-20:00	LinkedIn content	A
Thursday	18:00-20:00	ERIS concept work	E
Friday	18:00-20:00	PhD applications	D
Saturday	Morning	Drone field session	B
Sunday	19:00-21:00	Weekly review	All

Month 1 exit milestones

- Rufford submitted
- email provider connected
- 4 LinkedIn posts live
- biodiversity vertical pitched
- ERIS v0.1 drafted
- nominator confirmed
- 20+ subscribers target

Month 2 exit milestones

- 50+ subscribers
- 8+ posts total
- first NGO demo flight executed or scheduled
- commission agreement in writing
- GEF concept note shared with NGO partner
- ERIS framework shareable

REMEMBER

Sunday review is sacred. If you skip it twice in a row, stop everything and reset to the most urgent track actions immediately.

The FounderAI technical roadmap

WINDOW	FOCUS
2026-04-20 to 2026-04-22	V4 founder-brain sync
2026-04-22 to 2026-04-25	Pio and grant runtime sync
2026-04-23 to 2026-04-28	Zacchaeus and Perpetua proof
2026-04-24 to 2026-05-02	Runtime test hardening
2026-04-29 to 2026-05-05	Hildegard briefing outputs
2026-05-01 to 2026-05-10	Clare and Francis upgrade
2026-05-06 to 2026-05-14	Columban bounded improvements
2026-05-08 to 2026-05-14	Model router refinement
2026-05-12 to 2026-05-20	Gmail API integration
2026-05-15 to 2026-05-25	Docker and low-cost deploy path

Guardrails

- no phase weakens approvals
- no cloud work deletes file-auditable behavior before an inspectable replacement exists
- new agents extend the six-lane structure rather than replace it

The launch and research campaign roadmap

Five-week LinkedIn launch

- Week 1: establish credibility
- Week 2: deepen trust
- Week 3: teach ethics/process and capture checklist leads
- Week 4: introduce the solution softly
- Week 5: convert with more direct offer language

Cadence: Tue 13:00 EAT, Wed 16:00 EAT, Thu 13:00 EAT, Fri 16:00 EAT.

ATBC campaign

Target: USD 3,000 before June 2026

- passport: USD 150
- Chinese visa: USD 185
- flight: USD 1,400
- accommodation: USD 600
- transport and meals: USD 300
- conference materials: USD 365

TODAY

Each post, page, and visual must know whether it is warming, teaching, proving, or converting.

The critical path and dependencies

Master priority order

1. publish and operationalize what already exists
2. connect the lead magnet and follow-up system properly
3. align Shopify, Payhip, and the repo site
4. finish the delivery-side assets for the actual product business
5. prepare the later Netlify migration without forcing it now

Current sequence

1. freeze truth
2. deploy the current repo site
3. verify public routes and previews
4. connect the lead magnet to real follow-up
5. move high-value forms into Kit when ready
6. align Payhip, Shopify, and repo messaging
7. finish delivery polish for Products 1 to 4
8. launch Products 2 to 4 carefully

What breaks the path

- speaking from future truth
- reopening already-finished website work
- treating cold traffic like buyer traffic
- adding technical complexity before delivery complexity is under control
- letting grants, products, site, and outreach drift apart

Part IV

The Daily Practice (Living It)

This part tells you what to do every day, every week, and every month, how to make decisions, when to review, and how to recover when doubt shows up.

You do not need a fake startup story. You need one real step today, and a rhythm strong enough to survive tomorrow.

Daily, weekly, and monthly rituals

Daily

1. re-read current truth
2. touch one survival task
3. touch one compounding task
4. capture one learning artifact
5. end the day knowing tomorrow's first move

Weekly

Follow the non-negotiable weekly rhythm from the roadmap and protect Sunday review.

Monthly

Ask what became real, what stayed imaginary, what sold, what got delivered, what drifted, and where the next leverage point is.

Decision-making frameworks

The truth test

- Is this claim true now?
- Is this offer real now?
- Is this route operational now?
- Can someone verify what I am saying?

The stewardship test

- Does this protect the mission?
- Does this avoid extractive drift?
- Does this preserve scientific honesty?

The leverage test

- Does this create immediate cash or dignity?
- Does this create longer-term credibility or protocol?
- Does this create future ERIS leverage?

The approval and explainability tests

- Is this external, financial, destructive, or publish-sensitive?
- Can I explain the code, prompt, method, and deliverable clearly?

When to revisit each section

Re-read Part I when

- you are tempted by generic work
- you are exaggerating future readiness
- you forgot why Madagascar-centered field truth matters

Re-read Part II when

- the site, products, research, and runtime feel disconnected
- you are about to add a new tool or platform
- you need to explain the business clearly

Re-read Part III when

- you lose sequence
- you start chasing lower-leverage tasks
- you are about to relaunch something already planned

Re-read Part IV when

- you feel overwhelmed
- you are avoiding the Sunday review
- you need a decision filter more than new ideas

When you doubt

"I am too small."

Small and honest beats inflated and brittle.

"I should wait until everything is polished."

Truthful imperfect systems beat elegant imaginary systems.

"Real scientists do not sell."

You do not need to avoid selling. You need to sell without lying.

"The system is too complex."

Complexity must keep earning its place by preserving memory, approvals, portability, and explainability.

WHEN YOU DOUBT

Go back to the forests. Go back to the notebooks. Go back to the founder-brain files. Go back to the one true live offer. Go back to the weekly rhythm. Go back to what is real.

Daily reminder

REMEMBER

You are building from Madagascar.

You are building from real field experience, not borrowed authority.

You are building OPLURIX as the public-facing layer of useful conservation work.

You are building ERIS as the long arc toward ecological integrity infrastructure.

You are using FounderAI to preserve memory, judgment, approvals, and execution discipline.

You have one live product now. You do not need to pretend the whole catalog is live.

You do not need to pretend the automation is finished.

You do not need to pretend the mission is already institutionally adopted.

You need to speak from what is real.

You need to protect scientific honesty.

You need to keep the mission larger than your ego.

You need to keep survival in view without surrendering stewardship.

You need to answer messages fast, personalize outreach well, keep the weekly review sacred, sell only what is true, and deliver what you sell.

You need one real step today.

Survival engine first. Stewardship always. Evidence over claims. Open method before black-box authority. Reality compounds.

Today's five lines

1. Do one survival task.
2. Do one compounding task.
3. Tell the truth in public.
4. Protect the mission in private.
5. End the day knowing tomorrow's first move.

Reading edition note

This HTML page is the browser reading edition synced to the canonical markdown book on 2026-05-26. When content changes again, update [the markdown edition](#) first.
